

USER MANUAL

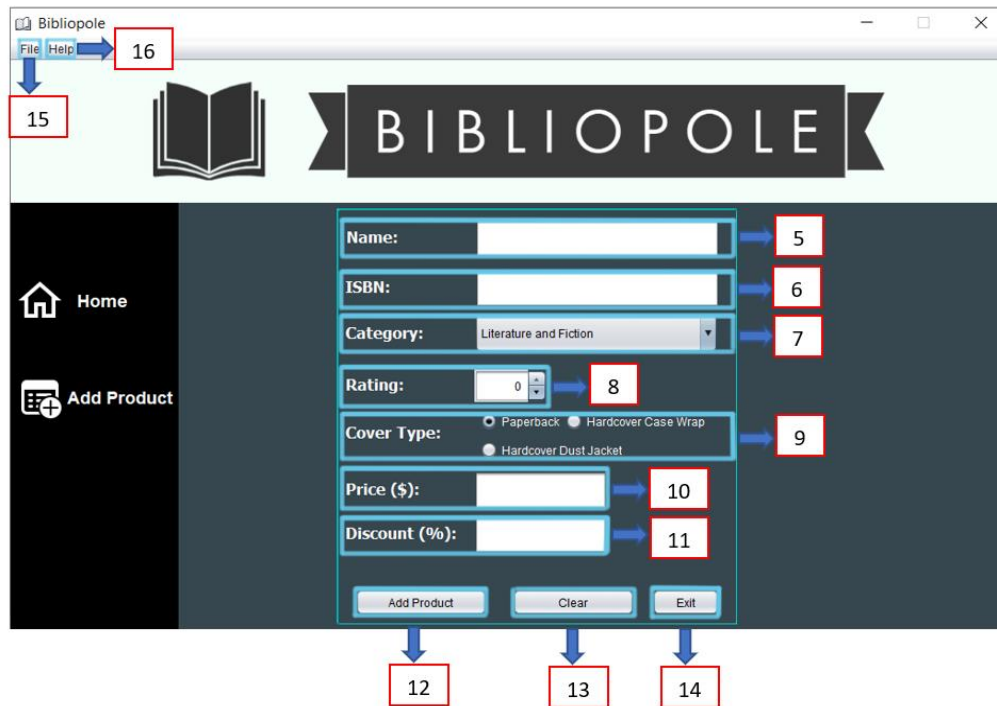

1. Home: Home Panel displays data stored, and those stored data are displayed or searched by their respective price and category for that it has 'Search by Price' and 'Search by Category' buttons.

2. Search by Price: This Button is used to find out the data stored by their respective price, and only the number is acceptable.

3. Search by Category: This Button is used to find out the stored data through their category, and for that, it has about eight different categories in options.

4. Add Product: Add Product Panel is all about adding the product in the given required text field.

5. Name: This name text field is used for naming the product, and both numerical and alphabet are acceptable.

6. ISBN: This ISBN text field is used to add a unique number, which indicates the added item, and while adding ISBN requires a specific format. The correct way of adding ISBN is ISBN: 97(9/8) and adding ten more numbers in which 13 numbers should be entered.

7. Category: Category shows all available eight options to select any one of them.

8. Rating: This rating spinner is used to insert ratings as provided by literary critics.

9. Cover Type: This Cover type has three options that determine the value of the product added.

10. Price: This Price text field is used to add or give a price tag to a product that the user adds.

11. Discount: This Discount text field is used for deducting a specific amount or percentage from the actual price of the product.

12. Add Product: This add product is used after adding all the required text field to store the added data.

13. Clear: This Clear Button is used to clear all the insert values from the text field.

14. Exit: This Exit button is used to close the entire program from the screen.

15. File: File Menu bar includes two menu items as given below:

- **Open File:** Import file Menu item is used to open the data previously stored in the CSV file while updating to the table. Shortcut as 'Ctrl + O' can be used to perform this action.
- **Import File:** The import file Menu item is used to import the all-stored data in the home Panel. Shortcut as 'Ctrl + I' can also be used to perform this action.
- **Exit:** Exit menu item is used to close the entire program from the screen. Shortcut as 'Esc' key can also be pressed to perform this action.

16. Help: This help menu bar includes only one menu item, especially for guiding users.

- **User Guide:** This User Guide menu item is used to guide the user for using the program and in which all the instruction is provided for the user for a better experience while using the program. Shortcut as 'Ctrl + H' can also be used to perform this action.
